

## Playing Movie Files in WebCT

### **What do I need to play the movie files**

These movie files are in either Shockwave or Quicktime format. They should play within the WebCT window as long as you have Shockwave and Quicktime installed on your computer. If you have trouble playing any of the movies you might need to install either of these players.

### **The movie does not play**

There are two reasons the movie files might not play

1. Some of the files are extremely large and, depending on your connection speed, can take several minutes to download before playing on your computer. Even with a good DSL connection it might take two or three minutes before the movie will start playing.
2. You might need to install Quicktime or the Shockwave player. Shockwave usually come installed on most computers but if you have an older computer you might need to install one or both of these.

### **How do I install Quicktime**

To download and install Quicktime visit

<http://www.apple.com/quicktime/download/standalone.html>

Download the stand alone player and follow the instructions at the site to download and install the stand alone player.

### **How do I install the Flash player**

To install the Flash player visit <http://www.macromedia.com/downloads>

Follow the instructions at the site to install either the Shockwave player.

If you have any further technical questions or have trouble playing one of the movies call 678-547-6259 for further help.
